NP12 Winnebago NP12

Another irregularity that has grown up within recent times is the occasional transmission of the clan war-bundle in the female line. In olden times it could only be transmitted in the male line, so as to prevent its passing out of the clan. It was, however, not always passed to the eldest son, but to that one who, by his actions and the interest he manifested in learning the legends and songs pertaining to the ceremony, showed himself capable of properly providing for the bundle. Now it happened occasionally that a man either possessed no son or that his son did not show sufficient interest in all that pertained to the bundle. In such a case the father had the alternative of giving it to some near relative in the male line, and if there were none of either giving it to some distant relative in the male line or the son of his sister or daughter. This, of course, happened very rarely, and in all probability the female line would eventually have to return it to the clan to which it originally belonged.

We have described these two instances of transmission in the female line in some detail in order to show how simply they can be explained without the intervention of any theory that the Winnebago reckoned descent in the female line originally. Such a claim has been made by Morgan and reiterated by Frazer. It seems to be based on the fact that Carver found the daughter of a Winnebago chief, known to the whites as Glory-of-the-Morning, and her children occupying an exceptional position among the tribe, or at least among the division of the Winnebago living at the upper end of Lake Winnebago, Wis. Her position and that of her children, one of whom has become well known in Winnebago legends, *Toop'oxepa*, was, however, due to the fact that she married a Frenchman named Decora. She was not the chieftainess of the tribe nor were any of her children, strictly speaking, chiefs of the tribe. In any case her position had nothing to do with female descent and at best but illustrates what we have said before about the clan to which children of such a union belong.

INDIVIDUAL NAMES

Before turning to the specific study of each clan a few words must be said about the individual names. From a purely descriptive point of view the names can be arranged in nine classes:

I. Color.
II. Physiological characteristics.
III. Social functions.
IV. Animal and plant forms.
V. Animal characteristics.
VI. Natural phenomena.
VII. Quality.
VIII. Episodes of a legendary character.
IX. Personal achievement.
